DETAILED ACTION

This Office Action is in response to amendments and remarks filed July 24, 2003.

Claims 1-3 are currently pending.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, as understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Kumagai et al. (U.S. Patent 5,742,378).

Regarding claims 1-3, Kumagai et al. disclose (see Figure 13) an automatic focusing mechanism having a telescope for sighting a leveling rod (see Figure 2) with pattern marks at an equal pitch between each mark, and a photoelectric device (15) for converting an image sighted by the telescope into an electric signal with a set range to automatically adjust a focus on the rod, the mechanism comprising: driving means (17) for moving a focusing lens (112) of the telescope from one end toward an opposite end of a movable range of the focusing lens; pitch computing means (15 and 166; see also Figures 12 and 14) for obtaining only the pitch of the pattern marks as claimed to obtain a distance (see column 4, lines 20-25) based only on the pitch; and fine adjusting means (see column 14, lines 10-15) for moving the focusing lens to a position corresponding to the distance. Furthermore, Kumagai et al. disclose one end is a position corresponding to an infinite distance; the focusing lens is inherently driven

toward the objective lens to sense the presence of the rod for pitch determination.

Furthermore, the entire targeted area is not scanned for focusing; only the areas having the leveling rods are detected (see column 2, lines 53-56).

Response to Arguments

3. Applicant's arguments filed July 24, 2003 have been fully considered but they are not persuasive.

Applicant has failed to point out the differences between the invention and the prior art. As understood, the prior art disclose all the elements of the invention. Thus, as set forth above, this rejection is proper.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
